Lecture Four

Q1- Not recommended to use tables for HTML layout, why?

Future-Proofing:

The use of tables for layout is considered outdated, and it may become obsolete in the future as web standards and best practices evolve. Adopting modern layout techniques, such as Flexbox or Grid, ensures a more future-proof design.

Q2- Rewrite the above code in the “2. Procedure section” using semantic elements and attributes but without using the tables and CSS.
